With one (N, U) point + noise, multiple M's are consistent
$M = 0.45$
$M = 0.6$
$M = 0.95$
noise band around U_{obs}
observed (N, U_{obs})
all three curves
lie inside the band
but they diverge
for other N!

Subsampling at many depths pins M tightly
multiple points
pin down which
curve is right
$M = 0.45$
$M = 0.6$
$M = 0.95$
subsampled
(N_{sub}, U_{obs})
